

Quoins

Give your project a traditional aspect.

Weser quoin cladding enables you to enhance your façades and give them the traditional aspect of older houses. Depending on the style you wish to adopt, the cladding can be staggered, or laid straight.

QUOINS

Product name	Reference	Colour	Size (cm)	Weight	Price
24x49 quoins	CA 49.5	B/P	(49.5 x 24) x 24 x 4	13.2 kg	
39x39 quoins	CA 39	B/P	(39 + 39) x 24 x 3	4.5 kg	
Quoin fixing kit	FIX CA	-	-	-	

LAYING

Quoins can be laid on new cast concrete or block walls. They can also be laid on existing walls as long as they are true.

In all cases a thin layer of ready-mixed mortar must be applied to the wall beforehand to ensure correct waterproofing.

The exact vertical alignment must be drawn on the underlying wall. The elements are fixed using Weser-Mix CO fixing mortar and special stainless steel ties developed by Weser. Check that the element is level before tightening the ties to their final position, and then fill the tie hole with mortar before laying the next element.

10mm joints must be left between elements. Use wedges during laying to keep the joints regular, and remove them before jointing with Weser-Mix JL mortar.

Because they are made with natural aggregates, these products may vary slightly in colour. We strongly recommend mixing the blocks when laying them to obtain best results. In order to improve its products, Weser reserves the right to modify them without notice.
